Allowable Subject Matter

Claims 10 and 11 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(b), claims 7 to 9, directed to the process of making or using the allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because a claimed invention previously withdrawn from consideration under 37 CFR 1.142 has been rejoined, **the restriction requirement of groups I and II as set forth in the Office action mailed on April 26, 2007 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claims 7 to 11 are allowable.

The following is an examiner's statement of reasons for allowance: A steel sheet having a defined composition wherein the steel sheet contains simple or compound nitrides, having a diameter of 0.02 to 0.5 μm , containing boron or aluminum and having an average diameter of at least 0.08 μm , and the proportion of the number of the

Art Unit: 1793

nitrides of 0.05 μm or smaller in diameter to the total number of the nitrides is 10 percent or less as set forth in claims 10 and 11 and its method of making as set forth in claims 7 to 9 of the present application are not taught or fairly suggested by the art of record for the reasons stated in Applicants' Appeal Brief and 1.132 Declaration filed July 27, 2010.

Japanese patent 2002-80934 and related US Patent 6,808,678 to Murakami teach a steel sheet containing a particle size distribution of nitrides significantly different from the particle size distribution of the nitrides in the presently claimed steel sheet as shown in Figure 1 of Declaration. Also criticality of Applicant's claimed nitride limitation to achieve new and unexpected results is demonstrated in Figure 2 of Declaration wherein tensile strength of steel sheet of present invention provides a greater total elongation compared to steel sheet of prior art with corresponding tensile strength.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
